

My Compiler Project

By Super Sneaky Student

Unique filler text for the super sneaky student block 0. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 1. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 2. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 3. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 4. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

For my project, I decided that the lexical analyzer relies on finite state automata because I learned about it in class. It was surprisingly easy to code.

Unique filler text for the super sneaky student block 6. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 7. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 8. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 9. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 10. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 11. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

My recursive descent parser was slow, but I read about a technique which guarantees linear time complexity during parsing. I might try that next time.

Unique filler text for the super sneaky student block 13. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 14. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 15. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 16. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 17. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 18. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 19. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Finally, I spent three weeks reducing the abstract syntax tree into machine code. It was the hardest part of the entire semester.

Unique filler text for the super sneaky student block 21. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 22. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 23. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.

Unique filler text for the super sneaky student block 24. The student is trying very hard to hide their copied work by scattering tiny phrases throughout the document.
